

Abrar Habib

Software Engineer — Full-Stack, Python, AI/ML

Scarborough, ON · (647) 522-9553 · abrar04h@gmail.com · github.com/xbrxr03 · linkedin.com/in/xbrxr03 · abrarbuilds.com

Software engineer with experience in backend APIs, data automation, and IT infrastructure. Built ClawOS, an AI agent system that runs locally without external APIs (53 stars on GitHub), and runs a self-hosted homelab.

Skills

Languages	Python, TypeScript, JavaScript, Bash, SQL
Frontend	React, Next.js, Three.js, Tailwind CSS, HTML, CSS
Backend	Node.js, Express, FastAPI, Django, REST APIs, WebSockets
Databases	PostgreSQL, SQLite, MongoDB, ChromaDB
Infrastructure	Docker, Nginx, Linux, AWS (EC2, S3), GitHub Actions, TrueNAS / ZFS, WireGuard
AI / ML	Ollama, local LLMs, RAG, prompt engineering, Whisper, Piper

Experience

Data Operations Specialist Jul 2024 – Nov 2025

LionSton Group — Remote (Contract)

- Reconciled over 10,000 financial records across QuickBooks and internal systems.
- Wrote Python scripts to automate data validation, which cut manual entry time by 60%.
- Maintained SQL pipelines moving data between accounting systems and reporting databases.

Software Developer Summer 2022 – 2024

VertexGrid Technologies — Remote (Contract)

- Built and maintained REST APIs in Python (Django) for internal tools handling around 10,000 requests a day.
- Designed PostgreSQL schemas and added indexes to speed up slow queries on the busiest tables.
- Set up CI/CD with GitHub Actions to run tests and deploy to AWS EC2.
- Packaged services with Docker so dev, staging, and production matched; reviewed teammates' pull requests.

IT Support Technician 2020 – 2022

Go-Co — Toronto, ON

- Set up and maintained network gear (routers, switches, Wi-Fi) across several sites for 50+ users.
- Managed Linux servers and SSH access, and wrote Bash scripts to automate setup.
- Troubleshooting LAN, DHCP, DNS, and VPN problems; built out workstations and dev environments.

Projects

ClawOS github.com/xbrxr03/clawos · 53 stars2024 – Present

Personal project

- An AI assistant that runs entirely on your own machine — no API keys, no cloud. Takes voice commands and runs them through a multi-step agent pipeline with manual approval before it acts.
- ChromaDB-backed long-term memory and 31 tool integrations, routing requests to different local models through Ollama.
- React dashboard that shows live agent activity over WebSockets.
- Built with Python, FastAPI, React, Docker, ChromaDB, and Ollama.

Homelab abrarbuilds.com 2023 – Present

Self-hosted server setup

- Run a TrueNAS server on ZFS with mirrored drives for reliable storage.
- Set up a WireGuard VPN on a Raspberry Pi for remote access, plus AdGuard for network-wide DNS filtering.
- Run local language models with Ollama on a GPU, and host everything in Docker behind an Nginx reverse proxy.
- Tools: Linux, ZFS, WireGuard, Docker, Nginx, Raspberry Pi.
